EXECUTIVE SUMMARY

Apex proposes a robust enterprise procurement platform with a strong focus on scalable architecture, secure integrations and controlled data access.

PROPOSED TECHNICAL SOLUTION

Uses modular cloud architecture, documented REST APIs, role-based access and a scalable integration layer. Includes architecture diagrams in the final design phase.

IMPLEMENTATION PLAN AND TEAM

12 weeks: discovery (2 weeks), design (3 weeks), configuration and integration (4 weeks), testing (2 weeks), and deployment (1 week). A project manager, solution architect and four engineers are proposed.

COMMERCIAL PROPOSAL

Implementation: INR 32,00,000. Annual support: INR 4,00,000. Third-party licenses are excluded. Travel expenses are billed separately.

SECURITY AND COMPLIANCE

Proposes encryption in transit and at rest, role-based access, audit logging and vulnerability testing. States that security controls are available, but current independent certification evidence must be verified.

SUPPORT AND EXPERIENCE

Provides business-hours support, a proposed four-hour response for critical incidents and quarterly reviews. Two comparable enterprise implementations are referenced.

KEY RISKS AND OPEN ITEMS

Higher initial price; certification evidence and final service-level commitments require confirmation.
